Produce your own electricity with our photovoltaic kits...

We offer the best solutions for photovoltaic renewable energies ..

As a solar studies office and photovoltaic installer, our company supports its customers in all phases of projects: from the design to the maintenance of the installation.

How does photovoltaics work ?

Photovoltaic installation in an isolated site consists of:

- * Solar panel that provides energy to the charge as well as to the battery.
- * Battery that stores energy and restores it when there is insufficient sunshine.
- * Controller that controls the charge and discharge of the battery.
- * Inverter that converts direct current into alternating current

CLEAN

No nuisance,
no pollution!

PROFITABLE

Immediate and sustainable profitability. Return on time invested reduced!

AUTONOMOUS

Self-sufficiency of electricity up to 3 days of autonomy!

ALTERNATIVE ENERGY SYSTEMS OFFERS YOU:

- 10 years guarantee for photovoltaic modules
- 5-year manufacturer's warranty for inverters
- Qualified technical team.
- State subsidy of 40% of project cost.
- Partnership with major suppliers and global research offices.

HIGH QUALITY
MADE IN GERMANY

AES provides a wide range of high performance products manufactured by the largest global suppliers of high-quality services thanks to its skilled technical team !
